

A06B-6127-H102

Industrial automation components

Manufacturer	Fanuc
Catalog number	a06b-6127-h102
Category	Industrial automation components
Product type	Industrial automation components
Status	Active product

Technical specification

Weight	3.18 kgs
Weight	3.18 kg
Input Voltage	400 VAC
Product Type	Servo Amplifier Module
Series	ALPHA i
Compatibility	Fanuc Servo Motors

Description

The Fanuc A06B-6127-H102 is a single-axis servo amplifier module from Fanuc's ALPHA i series, specifically designed for high-performance servo control applications. Operating on a 400VAC input, this module is engineered to deliver precise and efficient control for various industrial automation systems. Its compact design ensures easy integration into existing setups, while its robust construction guarantees reliable operation in demanding environments. The A06B-6127-H102 is compatible with Fanuc's advanced servo motors, providing seamless communication and optimal performance. This module is ideal for applications requiring high-speed and high-precision motion control, such as CNC machines, robotics, and automated assembly lines. Its energy-efficient design contributes to reduced operational costs, making it a valuable component for enhancing the performance and efficiency of industrial automation systems.
