

A06B-6150-H075

Industrial automation components

Manufacturer	Fanuc
Catalog number	a06b-6150-h075
Category	Industrial automation components
Product type	Industrial automation components
Status	Active product

Technical specification

Weight	20.87 kgs
Signal Type	480
Signal Level	480 V
Voltage	400 - 480 V
Current	154 A
Measurement Range	400 - 480
Product Type	Converter

Description

The Fanuc A06B-6150-H075 is a high-performance power supply module from Fanuc's Alpha I series, designed to deliver reliable and efficient power to industrial automation systems. Operating within an input voltage range of 400-480 V AC, this module supports 3-phase power with a current rating of 154 A at 400 V, ensuring stable and uninterrupted power supply for demanding applications. It provides an output voltage range of 565-679 V DC and a power rating of 82 kW, making it suitable for high-capacity industrial machinery. The module operates at a frequency of 50/60 Hz, accommodating various industrial environments. With dimensions of 38 cm (14.9 in) in height, 30 cm (11.8 in) in width, and 27.2 cm (10.7 in) in length, and weighing approximately 22 kg (48.5 lbs), it is designed for easy integration into existing systems. The A06B-6150-H075 is part of Fanuc's Alpha I series, known for its superior performance and durability in industrial applications. This power supply module is ideal for use in CNC machining centers, automated production lines, and other applications requiring high-power support. Its robust design and advanced features ensure consistent power delivery, contributing to the smooth operation of industrial machinery.
